PREFACE

The **Final Status of Natural Resource Legislation in the 49th Montana Legislature** provides a listing of environmentally related legislation introduced in the 1985 Legislature.

The status can be used to evaluate developments on a variety of natural resource subjects. It also provides background information for future policy decisions and is a valuable research document for citizens interested in environmental legislation.

The status includes titles or brief summaries for all natural resource bills, vote tallies for bills that passed, and committee assignments for bills that died. For copies of specific bills contact the Legislative Council, State Capitol, Helena, MT 59620.

Natural resource legislation remained a strong concern in the 1985 Legislature; one of every six bills introduced addressed natural resource issues. Mineral and petroleum development generated the most legislative activity, particularly use of the coal severance tax and resource indemnity trust tax, reclamation, and local impact mitigation.

Water policy legislation was among the major natural resource issues considered in the 1985 session. HB 680 is a comprehensive bill intended to protect Montana's control over state water resources, particularly in relation to claims from downstream interests. The bill addresses several controversial issues, including establishing a state water leasing program and repealing the ban on using Montana water for coal slurry. HB 680 also establishes new water policy guidelines for Montana and creates a permanent legislative Water Policy Committee to oversee water policy planning.

Stream access was one of the most hotly debated issues in the session, as the Legislature sought to resolve issues raised by recent Montana Supreme Court rulings. Legislation adopted defines laws relating to recreational use of state waters and clarifies the rights and responsibilities of landowners and recreationists.

The Legislature undertook several major initiatives in hazardous materials management. The "Employee and Community Hazardous Chemical Information Act" requires employers to provide information concerning hazardous chemicals in the workplace. This law is intended to enhance worker and community safety by making information available on the potential hazards and safe handling of chemicals in the workplace. Other hazardous materials legislation allows the Department of Health and Environmental Sciences to regulate underground storage tanks and to take emergency action to prevent or alleviate releases of hazardous materials into the environment.

Weed control laws underwent major revision in the 1985 Legislature and a trust fund for weed management projects, funded by a tax on herbicides, was established.

The Environmental Quality Council prepared the **Final Status of Natural Resource Legislation in the 49th Montana Legislature** as a service to legislators and the public. The Montana Environmental Policy Act (MEPA), enacted in 1971, charges the council with researching and reviewing state regulations and policies affecting Montana's environment, gathering information on current environmental issues, and recommending measures to promote the general welfare of present and future generations of Montanans. For more information on EQC publications and activities write the EQC, Capitol Station, Helena, MT 59620, or phone (406) 444-3742.
